241 [778] In the middle of the field was usually placed an earthen representation of the clan animal. As to how squash and beans were planted, no reliable information is available. The corn was planted in small circular mounds which, to judge from those near Madison, Wis., were arranged in remarkably straight rows.

[142 177] The author is unable to say what type of implements was used, as the Winnebago have been using those of European manufacture for many years and have no recollection of any other kind.

241 527 782 If anyone had more corn planted than he could take care of he gave a feast, to which he invited all who had hoes. At this feast dried corn was used. On this occasion the people sacrificed tobacco to their hoes, so that they might not cut themselves with these implements or have other accidents. Then they all joined in helping their host cultivate his corn.

249 In addition to the above-mentioned patches, most Winnebago had small fields of tobacco, which were regarded as very sacred. The tobacco grown on these was used only for sacrificial purposes. Sacred gourds also were planted in these fields.

222 *Berry picking.*—From the earliest times the Winnebago were known for their bountiful supply of berries. Every fall parties of men, women, and children went out to pick cranberries and whortleberries.

222 787 *Customs when berries are ripening.*—If a man has a son whom he loves very much, he has him fast as soon as the berries and other things begin to ripen. If this boy dreams of something good, then he (the father) gives a feast with the newly ripened food and the boy eats. If the boy does not dream of anything good after four days, the father makes him eat and has him try again.

222 *Rice gathering.*—In common with the Central Algonquian tribes, with whom they have come in contact, especially the Menominee, the Winnebago spent a number of weeks every year gathering wild rice. The following description of the manner in which this is done is taken from a newspaper article published by Prof. A. E. Jenks of the University of Minnesota:

> Fox River from its source to Lake Winnebago was for hundreds of years a very productive field for this aquatic cereal, and along this river the Winnebago lived in plenty and peace with several wild rice eating tribes of the Algonkin stock. Probably a few families still gather their annual crop in that old domain; but most of the wild rice which the tribe now gathers is obtained in the sloughs of the Mississippi River near Lacrosse, Wis., and on the Iowa side of that river.
>
> The Winnebago gather the grain by running their canoes into the tall standing stalks before the grain is ripe. A stick is held in each hand of the harvester, one being used to draw the standing stalks over the edge of the canoe, while the other one is employed in tapping or striking the heads of the stalks, thus knocking the grain out of the fruit head into the canoe. After the canoe is full it is taken to the shore and emptied.

252 262 *Preparation of foods.*—Meats were prepared by broiling, in three ways—on stakes, over a rack, or under hot ashes. Only the ribs
